VITAMIN I Vitamin K3

01

It has been reported that chrome salt companies have recently raised the selling price of sodium alum several times due to the rising prices of key raw materials, such as imported chromite and concentrated sulphuric acid, which has directly led to a significant increase in the cost of K3 production. In addition, in the past three months, the production lines of mainstream enterprises have been frequently overhauled, resulting in low inventory levels and tight delivery cycles, a situation that deserves focused attention.

AMINO ACID I Methionine

02

At present, the domestic solid Methionine has manufacturers released a mid-year plan for maintenance, the offer was raised to 2.8usd/kg, the trade market offer is stable, not many inquiries, manufacturers shipments are mainly downstream users wait-and-see, the market turnover atmosphere is general, pay attention to the manufacturers to increase the price of the market after the purchase and sale, methionine prices are expected to be oscillating or slightly higher, but is expected to rise to a limited extent.

API I Colistin sulfate

03

Colistin sulfate, the recent factory price is strong, the current mainstream factory price is around 14usd/kg, the market low-cost supply is small, the customer price acceptance is relatively stable, the price is expected to run smoothly in the short term.

FOOD ADDITIVE I

04

Recently, Huangshan Tongxi Biotechnology Co., Ltd. "HMOs (human milk oligosaccharides) R & D and production expansion project" environmental impact assessment in the relevant government website publicity. This expansion project is to increase the original plant to build other varieties of HMO product research and development, pilot content. According to the improved production process, 4 new HMO (2'-fucose-based lactose) mass production lines will be built, and the production capacity of this product will reach 3,000 tons after completion; meanwhile, 3 existing pilot production lines will be technically modified to realize the pilot production capacity of other varieties of HMOs with an annual output of 300 tons.
